

- ❖ Capture, Separate, & Index Documents
- ❖ Classify Documents by Content or Type
- ❖ Redact Words, Sentences, Whole Pages or Sections
- ❖ Manual & Automatic Text Searches, including bracketed text
- ❖ Provide Analyst Review & Approval
- ❖ Offer Black-out or White-out Redactions
- ❖ Assign General Exemption Codes or Customize Your Own
- ❖ Create an Audit Trail for Legal Purposes
- ❖ Integrates with ODBC Compliant Databases and Document Management Systems

VeriDact AI

The automated declassification & redaction solution

VeriDact™ AI is an off-the-shelf verification software package that automates document declassification and redaction. With the ever-increasing need for monitoring of highly-classified information, **VeriDact™ AI** is a must-have for both government agencies and commercial companies. **VeriDact™ AI** is ideal for applications where security and confidentiality are a necessity to the rights and safety of individuals and the country as a whole.

Capture, separate and index documents

VeriDact™ AI is a custom module embedded within Kofax's Ascent Capture and Indicius products that can capture or import both fixed and free-form documents including application forms, claims, correspondence, reports and virtually any other document type. The software can separate batches of multi-page documents without inserting pre-printed separator sheets between them, eliminating printing costs and reducing batch preparation time. Index data can be automatically extracted from every document or page based on an indexing rule set built into the software.

Classify documents by content or type

As an option, VeriDact™ AI can offer classification by document type or content. As an example, if a user wished to perform a redaction process only on documents containing the words "weapons of mass destruction", VeriDact™ AI can sort those documents and redact the pre-defined words, phrases or concepts based on the redaction rule set.

Redact words, sentences, sections or whole pages

VeriDact™ AI automatically identifies words, phrases and concepts for redaction based on a pre-defined rule set or the word / phrase list may be customized to meet a certain application. The software also provides automatic word removal across multiple pages of a single document or across multiple documents.

Manually and automatically search text

VeriDact™ AI can automatically search for a word or phrase (including bracketed text) as pre-defined in the initial system rule set, or the user may request that a word or phrase, not defined by the redaction rules, to be added to the redaction set.

Provide analyst review and approval for each redaction

Once the document or documents have been targeted for redaction, a draft version of the document is sent to a review/analyst station for validation and verification. Each word, phrase, or concept proposed for redaction is highlighted in gray. The analyst can resize or move the redaction area, delete the area, add new areas, and add other properties such as exemption codes. See Screenshot below:

Offer black-out or white-out redactions

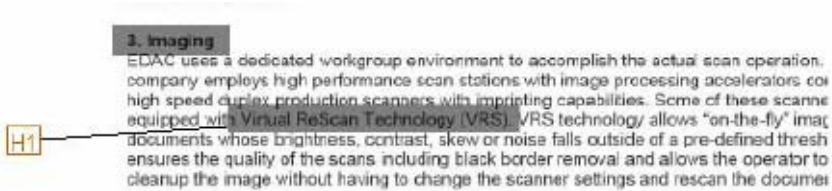

The User / Analyst has the choice of redacting in either black or white. Other annotations may be made in any of a number of colors. See a black-out redaction example below:

EDAC's facility in Fredericksburg, VA offers a secure location with dedicated spaces for pl document storage, scanning operations, and validation processes. Our experienced staff i to manage and operate the project with precise control. Along with this experience comes confidence of security clearances ranging from public trust to Top Secret.

Assign general exemption codes or customize your own

Each redaction may have an exemption code or other annotation associated with it. These codes may be pre-defined by a rule set, or can be customized for an individual document or usage. See screenshot below:

Create an audit trail for legal purposes

VeriDact™ AI will save an audit copy of the redacted document. If the original document was captured by VeriDact™ AI, then the user has the choice of saving the original as well the redacted version. The original can be saved in numerous formats.

Integrates with ODBC compliant databases and document management systems

VeriDact™ AI is able to directly release the original and/or the redacted copy directly into numerous Document Management and Universal Content Management Systems (i.e. Stellent, Documentum, Hummingbird, iManage, TRIM, and others) and any ODBC compliant database.

VeriDact™ AI Supports:
